

## Which Jack for my ATV or UTV?

The Hornet Outdoors Universal Quick Lift Jack was designed for off-road ATV/UTV use and also makes a great jack for your snowmobile or ATV/UTV trailer, your lawnmower, dock or even your boat lift. It is lightweight, has a high capacity, a long extension range, and is simple to use. Operate with the included crank handle, or remove the handle and use a ratchet or cordless drill. It will easily lift your ATV, UTV, trailer, or other small vehicle.

Hornet Outdoors manufactures two different jacks.

**Standard Height Jack** that has a lifting range of 13" and Telescoping drop leg that will let you lift from 6" to 36".

**Extended Height Jack** that has a lifting range of 20" and Telescoping drop leg that will let you lift from 7" to 48"

These jacks can be purchased "Naked" where you simply purchase the jack you need or they can be purchased with various mounting kits for your UTV, depending on your needs.

Standard U-5000 Series MSRP \$149.95 [Click Here](#) to see this Jack

This is a good all around jack for lifting the average UTV for changing a tire and general purpose work around your yard, farm, or ranch. When raising a UTV to change a tire, the shock travel distance for most utility UTV's is under 13" so you'll likely lift your UTV without having to block, drop the telescoping leg, and jack it up a second time.

- The 13" Lifting Range is adequate for most work and you can block, drop the telescoping leg and lift up to 36" if you need to go higher.
- 2,000 Pound Lift Capacity
- 6"-36" Extension Range via Telescoping Leg
- 6" Lift Tongue
- Weighs Only 13 Pounds
- Weatherproof Galvanized Finish

Extended Range U-5100 MSRP \$179.95 [Click Here](#) to see this Jack

- The 20" Lifting Range is ideal for UTV's with long shock travel where you want to lift all the way up in a single effort, without blocking and dropping the telescoping leg for another lift. Sport UTV's such as the Polaris RZR 1000 have a long travel distance so, if you wish to jack the vehicle up high enough to change the tire without having to block up the vehicle, drop the telescoping leg, and jack a second time, this is the jack you want!
- 7"-48" Extension Range via Telescoping Leg
- 2,000 Pound Lift Capacity
- 8" Lift Tongue
- 18 Pounds
- 27" Long When Completely Contracted
- Weatherproof Galvanized Finish

If you would like to mount your Hornet Jack on your UTV, the following configurations are available:

**Universal Roll Bar Mount Kit Fits 1.0" to 2" Round Roll Bars and Bumpers found on most UTV's:**
